THE CHALLENGE: Severe weather doesn't wait. Weather professionals need the best information possible, in the most usable form, as quickly as they can get it. When lives and communities are at stake, no one can afford to expect any less.

THE HARRIS SOLUTION: A half century ago, Harris Corporation pioneered the development of innovative weather satellite systems. Today, Harris is a leading provider of satellite ground data-processing systems that provide high-resolution Geostationary Operational Environmental Satellite (GOES) data. These data are used by the weather community to detect and track hurricanes, tornadoes, thunderstorms and other severe weather. Harris satellite ground systems have the highest degree of reliability, with the ability and speed to expand data retrieval as demand increases and with the flexibility to accommodate needs that do not yet exist.

THE NEXT GENERATION: GOES-R will provide significantly improved image resolution and increases the rate of imagery coverage of earth surfaces from every 30 minutes to every 5 minutes—and every 30 seconds for severe weather events. Harris scientists and engineers have already developed a working prototype ground system for GOES-R. Harris is ready to partner with NOAA to deliver a purpose-built ground system with new technology that is flexible, scalable and reliable.

Harris delivers GOES-East and GOES-West Satellite Data, National Weather Service (NWS) gridded forecasts and Red Book graphic data, NEXRAD, radar mosaics from NIDS, real-time lightning data, polar weather satellite data and other custom data solutions.

**WHEN SUCCESS IS YOUR ONLY OPTION,
YOU CAN TRUST HARRIS.**

HARRIS®

www.harris.com

With a presence in more than 150 countries, Harris has its metaphorical finger on the pulse of communications technology. Harris invents, innovates and inspires new markets, new business models, new technologies and new industries around the world.

Quite revolutionary, for a company that is more than 100 years old.
Quite extraordinary, in the turbulence of today's world economy.
Quite reassuring.
