Radio Interface

FLEXIBLE RADIO CONTROL OPTIONS

FOR THE FALCON III®
RF-7850A AIRBORNE
PRODUCT FAMILY

HARRIS® TECHNOLOGY TO CONNECT,
INFORM AND PROTECT™

harris.com | [#harriscorp](https://twitter.com/harriscorp)

ADVANCED TECHNOLOGY SOLUTIONS ENGINEERED FOR AIRBORNE SUCCESS

Built on combat-proven Falcon III® technology, the Harris Airborne family of products extends the tactical network to the aerial tier.

Both the RF-7850-MR and RF-7850A-UA can simultaneously send secure voice, high-speed IP-networked data and Full Motion Video. Unmatched in the airborne radio market, these Harris airborne solutions provide a level of communications flexibility that suit any aircraft requirement or special mission use-cases, all while accommodating unique operator needs.

AIRBORNE CONTROL OPTIONS FOR MISSION-CRITICAL COMMUNICATIONS

IN-COCKPIT RADIO CONTROL UNIT

Compact, versatile control option for aircraft retrofit or designing from the ground up

Certified for cockpit integration and optimized for pilot/copilot use, the In-Cockpit Radio Control Unit gives crew members the ability to control up to eight radio channels at once. Incorporating a full-color, NVIS-compatible graphical LCD screen, it also gives users the benefits of soft keys, simple menus and easy preset loading.

WEB-BASED USER INTERFACE

Intuitive user interface easily customized for avionics displays and edge devices

Standard applications within the Web-Based User Interface provide crew members the ability to monitor and update mission status through access to real-time voice, video and data. They can customize applications to fit their unique needs—including optimizing button availability to achieve the most intuitive user interface with their specific display devices. *This interface is shipped standard with every RF-7850A-MR unit.*

KEYPAD DISPLAY UNIT (KDU)

Based on Falcon III technology and using the same user interface as Harris ground tactical radios

The Keypad Display Unit is ideal for non-flight commanders and crews involved in mission coordination. Users can access radio channels with the push of a button and can quickly transfer mission data via a removable USB. *A single maintenance KDU (six-foot connector with USB) is shipped standard with every RF-7850A-MR unit.*

KEY BENEFITS

User-friendly, with simplified menus and preset loading

Compact and lightweight

Multi-channel control with single Ethernet connection

KEY BENEFITS

Quick integration with existing end-user devices

Easily customized to fulfill unique user requirements

Intuitive user interface

KEY BENEFITS

Familiar user interface for Harris tactical radio users

Large screen for network changes and embedded application use

Extension option enables control from the cockpit or passenger area
