

# HARRIS ENABLEPROTECT ADVANCED SYSTEM KEY

## SECURE, PROGRAMMABLE NETWORK ACCESS

### KEY BENEFITS

Two layers of user authentication safeguards the network from unauthorized users

Detailed read/write access levels enable proper handling of information

P25 trunking protection restricts cloning radios and talkgroup entry

Pass keys support a limited number of programming sessions for additional protection

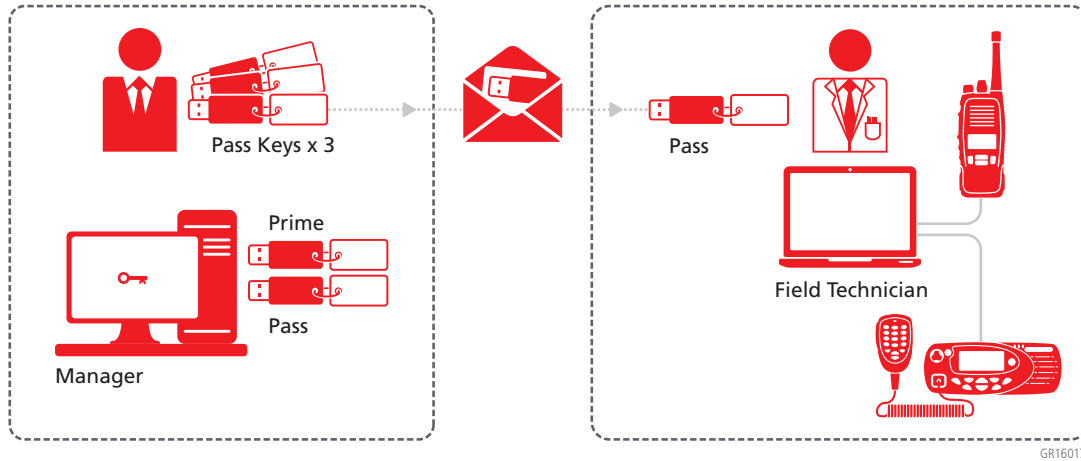

Prime and pass keys contain a replaceable internal battery, real-time clock with programmable expiration date

Harris EnableProtect Advanced System Key (ASK) provides layers of security to guard the access to your network. Uniquely configured USB Prime and pass keys safeguard against unauthorized use and provide additional monitoring of usage in the field.

EnableProtect ASK requires user authorization and authentication and controls the level of network access through USB Prime and pass keys. Passwords, pass key anti-cloning and read/write protection add extra layers of security so that data is not improperly modified or reconfigured. EnableProtect ASK also has the ability to check a radio's serial number and initiate radio customization for the intended user.

A pre-programmed system ID and WACN ID, authorized by Harris, protects against unauthorized use of the P25 trunking network. However, a configurable pass key still gives authorized users the ability to add or change P25 channel profiles, restrict the cloning of radios, and prevent entry of talkgroups.

## ENABLEPROTECT ASK

### SPECIFICATIONS FOR: HARRIS ENABLEPROTECT ADVANCED SYSTEM KEY

| GENERAL  |   |
