DEVELOPING SOUND FUNDING SOURCES FOR A PUBLIC SAFETY COMMUNICATIONS SYSTEM

When approaching how to fund your system, it’s most effective when it encompasses the entire life cycle. There are three main phases: Planning and Development, Procurement and Installation, and Operations and Maintenance. Each phase has a different funding profile or requirement.

PLANNING AND DESIGN PHASE is critically important since it influences the overall system cost. This is when short and long-term needs are determined and financial risks are reduced.

INSTALLATION AND PROCUREMENT PHASE is the acquisition of equipment and the installation and testing of the system. This phase is capital intensive for a short period of time and becomes a capital appropriation.

OPERATIONS AND MAINTENANCE PHASE involves day to day functioning of the communications system. Funding sources for this phase are sourced through the agency’s operating budgets and are dedicated for daily operations.

We at L3Harris are here to help you through this process. Architecting, deploying and maintaining communications systems requires unique funding solutions to meet the needs and objectives of the system. The L3Harris team will review your funding profile as part of the system solution and provide suggestions to align the appropriate funding profile with your system needs. Just as it takes a team to architect and deploy a communications system: it takes a team to develop the right funding profile and strategy for your project.
